Full Stack Developer @ Fast Growing Internet Start Up

We help top internet retailers better monetize their web traffic. We have an opening for a Developer to join us in our Raleigh office. If you have any interest in start-ups, e-commerce or digital marketing, and are passionate about design and digital media, this is an incredibly unique opportunity to join an accomplished team on the ground floor and help blaze the trail for future growth.

Job Description

- Play a critical role in both product development alongside our development team as well as work with a wide array of custom implementation projects for various ecommerce clients of Exit Intel.
- We are building an extremely exciting and valuable product. This is an opportunity to truly make a difference.
- We work in a very collaborative environment that is fast-paced, yet laid back.

Key Requirements

- Expert with PHP (MVC frameworks, Laravel specific a plus)
- Node.js
- AngularJS
- NoSQL databases (MongoDB, DynamoDB) as well as mySQL
- Amazon AWS (Extra points for Amazon Kinesis)
- Comfortable working with front end development in jQuery, HTML, CSS
- Experience with Ecommerce platforms and email APIs a major plus
- Analytics or Data Science experience also a major plus
- SOAP/RESTful API creation and integration
- Agile development methodology
- LAMP stack administration
- Source control with Git
- Strong attention to detail is a must

Compensation based on skill and experience.

To Apply

Email your resume, contact information, a short description of yourself, and why you would be a good candidate for this opening to Matt@ExitIntel.com.
